Claim Rejections - 35 USC § 103

1. Claims 1-8,10-12,15-30,32-35,37-39,41-54,56-58,61-65 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mann (6052624).

See previous office action.

Allowable Subject Matter

2. Claims 9,13,14,31,36,40,55,59,60 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The remarks made by applicant have been considered, however the above rejections are still deemed to be proper. Col. 7, lines 30+ of Mann teach that the desired electrode configuration, including various parameters, can be stored in memory to be used at a later date. Col. 9, lines 50+ teach various parameter configurations can be set through use of manual selection I/O devices. Col. 10, lines 59+ teach modification of the stored parameters using the directional programmer system. Col. 14, lines 25+ teach that modification of parameters can be done based upon patient reaction to the stimulation. Further, col. 15 lines 14-21 teach that the clinician and patient together determine the appropriate stimulation pattern. Thus, feedback from the patient is used in determining the stimulation parameters, which can then be stored in memory for later use.
